

HOW TO MAKE AN OCEAN-THEMED SKITTLES CANDY SCIENCE EXPERIMENT

SUPPLIES NEEDED TO MAKE AN OCEAN-THEMED SKITTLES CANDY SCIENCE EXPERIMENT

- Skittles Original & Skittles Berry
- white plate (better to see the colors spread)
- warm water

HOW TO MAKE AN OCEAN-THEMED SKITTLES CANDY SCIENCE EXPERIMENT

1. Prepare some warm water in a mug or measuring cup. You'll need about 1/2 cup to complete the experiment. The warmer the water, the faster the colors will melt from the Skittles.
2. Next, open the Skittles and arrange them in a fish scene pattern. To do this, create a zig zag pattern at the top to mimic ocean waves. Add vertical zig zags from the bottom to make sea weed. Finally, add orange Skittles to make a gold fish.
3. Now, you're ready for the actual experiment. To keep the ocean scene in tact, pour the water gently on the plate. Pour from the side. Avoid pouring it directly on the Skittles themselves.
4. Sit back, and watch the colors melt away from the candy. You and your kids will see a cool underwater scene emerge!

This experiment is so easy that your kids will beg to do it again and again. Because it's virtually mess-free, you'll say yes!
